[4] Water (WR)

[4.1] Water Conservation Program Implementation

1. The water reservoirs designed for water conservation program (entirely treated and distributed to the people across the campus for consumption (not for drinking)).

PHOTO BY KRIANGKRAI POORITATA, MEDICAL CLASS 26

2. Natural lakes and rivers interconnecting waterways across the campus, wholly for water conservation

3. Examples of waterways found all around the campus

Description:

SWU sufficiently produces and distributes water for consumption (not for drinking) to the people across the campus. More than half of the water conserved through surface runoff into the reservoirs, derived from both nature and construction. The volume of water is conserved fully in the containers such as natural lakes, ponds and reservoirs, made for water conservation purpose. However, water coming from rainfalls cannot be entirely conserved due to the capacity constraint of available reservoirs.
