#### **Description:**

SWU saw the importance of water recycling, and thus implemented water-recycling program. Water used for many purposes such as for laundry can be treated through the water-recycling program to be reused again. Furthermore, throughout the campus, there are several large lakes and interconnecting waterways serving as both repositories for conserving water runoff and as a source from which the vast swathes of vegetation across campus can be watered. With this attempt, in 2019, SWU can achieve the amount of 25-50% of water recycled, and the quality of water treated is within the standard for consumption (not for drinking), shown on the table below.
