Description:

UBRU has established a policy to promote the use of Zero Emission Vehicles (ZEV) as part of its development goals under the university's development strategy for 2022-2026. This initiative falls under Goal 8, "Environmental Sustainability and a Green University," which aims to create an environmentally friendly and green campus based on efficient resource management.

This policy comprises several strategies, including Strategy 2, which promotes and supports the use of alternative energy sources within the university to reduce energy consumption and carbon emissions. Strategy 3 focuses on advocating and promoting a Low Carbon Society for both students and staff at the university, aiming to reduce carbon footprints.

Throughout the year, significant activities have been undertaken, such as the installation of electric vehicle (EV) charging stations within the university campus. Furthermore, 13 electric three-wheel vehicles have been introduced to provide transportation services within the university, and an additional 100 bicycles have been made available for staff and students to use for commuting within the campus.

These initiatives have been endorsed by the university's administration, led by the university president and the management team, and are encouraged for adoption by all university departments. When considering the total number of Zero Emission Vehicles (including electric bicycles and electric cars) per the entire population (students + staff = 13,236 people), the average ratio is 0.009 vehicles per person.
